

With a motor kit, you can add movement to your invention! Use the kit, for example, to make your rally car drive.

WHAT DO YOU NEED?

1.

2.

GLUE GUN

Glue the battery holder in place with a glue gun. Place the holder for the DC motor above the large pulley.

TIP!

Do not glue the large pulley to your invention.

3.

TIP!

Make sure the motor's wires are pointing upwards.

4.

CONNECTING THE WIRES

Connect the motor and battery to each other using the terminal block.

TIP!

The metal in the terminal block and the wires must be connected.

5.

6.

TRY IT OUT!

Start the DC motor: turn the switch downwards.
